<sup>1</sup> Liquefied petroleum gases and pentanes plus are aggregated to avoid disclosure of proprietary information.

<sup>2</sup> Includes still gas not burned as refinery fuel.

<sup>3</sup> Distillate fuel oil, residual fuel oil, waxes, and miscellaneous products.

<sup>4</sup> U.S. Energy Information Administration (EIA) has altered the methodology for the natural gas estimates. The estimates are linearly interpolated between Manufacturing Energy Consumption Survey (MECS) years and held constant until data are available for the most recent MECS year.

<sup>5</sup> Petroleum—million barrels; natural gas—billion cubic feet; and coal—million short tons.

R=Revised. P=Preliminary. --=Not applicable.

Notes: • Estimates of consumption for non-combustion use shown in this table are included in total energy consumption (see Table 1.3). • See Note 2, "Non-Combustion Use of Fossil Fuels," at end of section. • Because of changes in methodology, data series may be revised annually. • Estimates of

non-combustion use in this table are considered industrial uses with the exception of approximately half of the lubricants which are considered transportation use. • Totals may not equal sum of components due to independent rounding.

Web Pages: • See <http://www.eia.gov/totalenergy/data/annual/#summary> for all data beginning in 1980.

• For related information, see <http://www.eia.gov/environment/>.
